World Patent of Bitcoin Hunter Coin

United States of America

To Promote the Progress of Science and Useful Arts

The Director

of the United States Patent and Trademark Office has received an application for a patent for a new and useful invention. The title and description of the invention are enclosed. The requirements of law have been complied with, and it has been determined that a patent on the invention shall be granted under the law.

Therefore, this United States

Patent

grants to the person(s) having title to this patent the right to exclude others from making, using, offering for sale, or selling the invention throughout the United States of America or importing the invention into the United States of America, and if the invention is a process, of the right to exclude others from using, offering for sale or selling throughout the United States of America, products made by that process, for the term set forth in 35 U.S.C. 154(a)(2) or (c)(1), subject to the payment of maintenance fees as provided by 35 U.S.C. 41(b). See the Maintenance Fee Notice on the inside of the cover.

Performing the Functions and Duties of the Under Secretary of Commerce for Intellectual Property and Director of the United States Patent and Trademark Office

Technical Explanation of Bitcoin Hunter Coin

[Description of the Development Process]

[Development Item]

Personal Cryptocurrency Mining System.

[Technical Field]

This development relates to a system for personal cryptocurrency mining.

[Background of the Development]

Bitcoin, one of the most representative cryptocurrencies, is a protocol that applies blockchain technology to financial transaction systems and enables digital assets to be issued and traded over the Internet through mechanisms such as smart contracts.

Bitcoin is a type of digital asset with no physical form. It can be traded globally on a peer-to-peer (P2P) basis without a separate central authority.

One of Bitcoin's key characteristics is that it addresses the Double-Spending Problem through blockchain technology. Various forms of digital currency existed before Bitcoin, but their practical use as money was limited because electronic information could be copied and used more than once. Bitcoin helped address this issue through blockchain-based cryptographic technology and a mining reward structure.

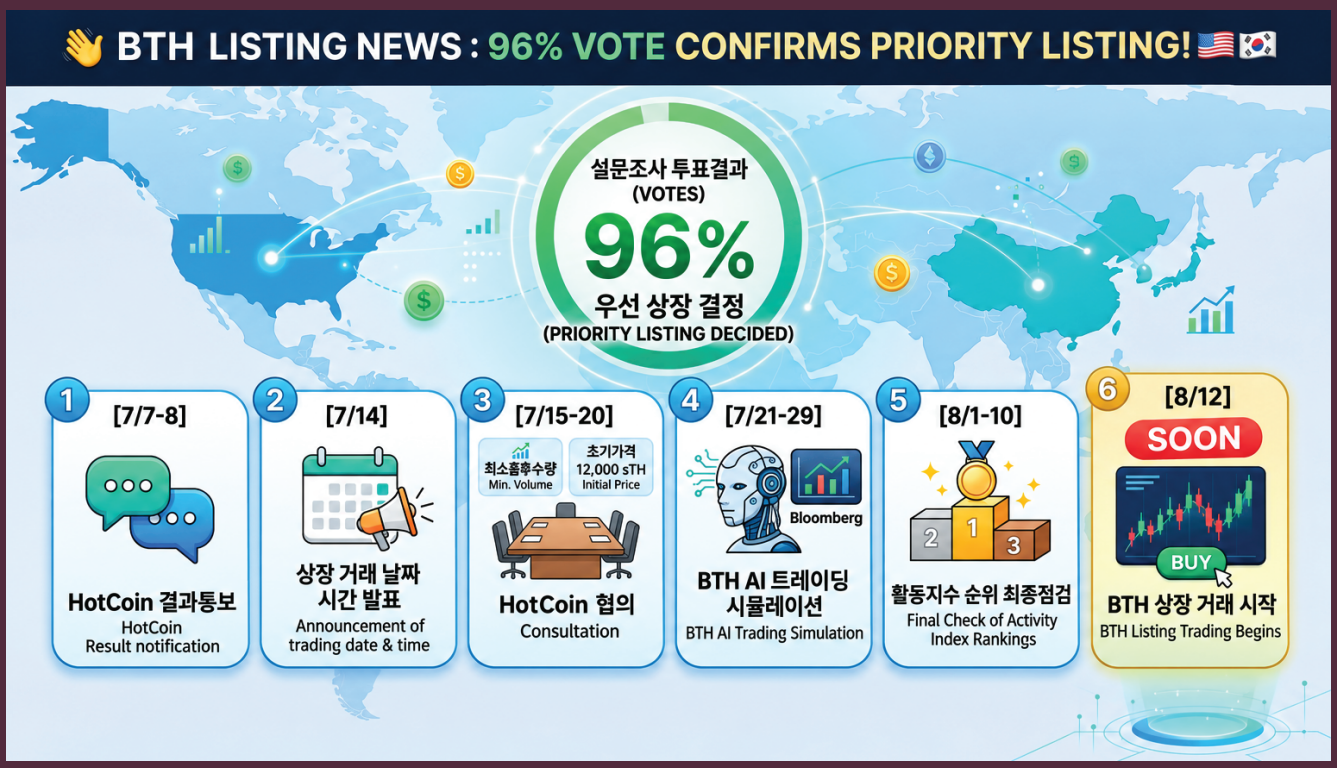

Traditional cryptocurrency mining systems have generally been designed to allow mining only when predefined conditions are satisfied. Based on this type of structure, Big Miracle aims to provide a system that allows users to review and manage the conditions and procedures required to use the service more conveniently.

Information regarding the filing and registration status of intellectual property rights related to Big Miracle is provided based on objectively verifiable official sources, including public records published by patent authorities in relevant jurisdictions. The registration status, scope of rights, and specific technical details of patents may also be verified through official public records. This Whitepaper does not make definitive statements regarding unverified registrations or technical evaluations.

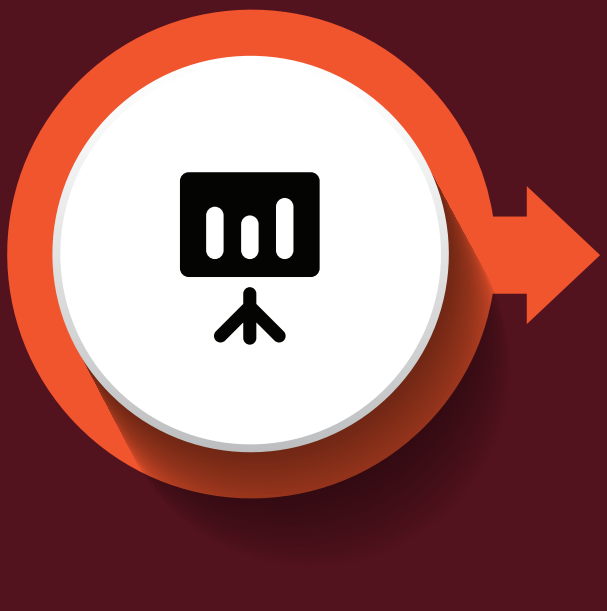

Bitcoin Group continues to develop and operate Big Miracle based on its experience in developing and operating cryptocurrency- and blockchain-related services.
The project focuses on enhancing service stability and user convenience while expanding the range of practical applications.

Key Risk Information

✓ Cryptocurrencies are digital assets that may be subject to significant price volatility, and no value or return as an investment product is guaranteed. In addition, the value of BID may decline if the technology and services provided by Bitcoin Hunter Coin are not sufficiently adopted in actual use cases or if market conditions change.

✓ Risk of Loss of Funds : Funds raised or used in connection with the project, as well as the value of BTH, are not guaranteed. If the value of the asset is impaired or a loss occurs, there may be no private or public insurance institution available to compensate purchasers for such losses.

✓ Business Failure Risk : The project's business operations, service development, marketing, and other activities may not proceed as planned or may be discontinued. Various unforeseen risks may also arise during the course of business operations.

✓ Technical Risk : The emergence of new technologies, including the development of quantum computing, and changes in the security environment may affect cryptographic technologies, including Bitcoin Hunter Coin. Technical failures, network disruptions, security incidents, or other unforeseeable circumstances may prevent BTH from being used normally.

BTH Coin is provided subject to applicable laws and without infringing the intellectual property rights of third parties. Except where otherwise required by law, it may be provided without any express or implied warranty.

However, certain jurisdictions may restrict or prohibit disclaimers of implied warranties. Accordingly, the scope and enforceability of the foregoing disclaimers may vary depending on the laws applicable in each jurisdiction.

Legal Disclaimer

This document is a Whitepaper intended to explain the basic concepts of the solutions proposed by the Company and its future platform. The contents of this document may be changed or revised at any time depending on the development and operational status of the project.

The Company is under no obligation to provide individual notice to recipients regarding revisions, updates, or additional information relating to this Whitepaper. This Whitepaper has been prepared solely for the purpose of providing information about the project and facilitating discussion. It does not guarantee the present or future value or price of any asset. Neither project representatives, including CEO Song Myung-ho, nor the Company make any guarantee regarding the future value or price level of Bitcoin Hunter Coin. The Company does not provide financial, investment, or other related advisory services.

This Whitepaper is a general overview intended to introduce Bitcoin Hunter Coin, its related business model, and the operational direction of the project. It is not intended to offer any financial product or investment product regulated in any jurisdiction, nor is it provided as a subscription document, solicitation, sales offer, or investment prospectus.

This Whitepaper also does not provide advice regarding whether to participate in the project. No decision regarding entry into a contract or participation in the project should be based solely on the contents of this Whitepaper. No express or implied warranty is provided with respect to the feasibility, appropriateness, or performance of any forward-looking statement or conceptual description contained herein.

The inclusion of any company name, platform name, or trademark other than that of CEO Song Myung-ho does not imply any affiliation, endorsement, sponsorship, or other official relationship between the project and such company, individual, or organization. For further information regarding any third-party company or platform, users should review the relevant official materials together with the applicable sections of this Whitepaper.

Token

Within the scope of services provided by the project, BTH token holders may use the token in the following ways :

1. Mining-related use : Detailed information regarding mining procedures and methods of use is available in this Whitepaper and through the official service information.

2. Participation in referral programs : Bitcoin Group may operate referral programs to support the growth of the project community. If a new user joins through an existing participant’s referral link, rewards may be provided in accordance with the applicable terms and conditions of the program in effect at that time.

3. Use with project partner services : BTH tokens may be used as a means of payment or access for certain products or services provided by project partners with which the project has an affiliation or cooperative relationship. Actual availability and scope of use are subject to the official information provided by each partner and service.

4. Use of project-specific features : BTH tokens may be used to access certain project features or membership-tier services. Detailed requirements for VIP status and related benefits are subject to the official terms of the relevant program.
Tokens can be used to obtain VIP status

Disclaimer

If you are uncertain about any decision relating to participation in the project, use of the token, or any other related matter, you are advised to consult an independent professional in the legal, financial, tax, or other relevant field.

No portion of this Whitepaper may be reproduced, distributed, or transmitted separately from this Disclaimer. This Whitepaper is intended solely to provide prospective users and token holders with information about the project and BTH.

The contents of this Whitepaper may not cover every matter relating to the project, and the document itself does not create any contractual relationship or legal obligation. The Company makes reasonable efforts to maintain the accuracy, currency, and relevance of the information contained herein; however, this Whitepaper and its materials do not constitute a substitute for professional legal, financial, tax, or investment advice.

192.6755

The project may revise or update this Whitepaper and related information without prior notice where necessary. To the extent permitted by applicable laws and regulations, the project may not be liable for any indirect, special, incidental, or consequential loss arising out of or relating to the accuracy, reliability, relevance, or completeness of the materials contained in this Whitepaper. Such losses may include loss of sales, income, profits, opportunities for use, or data arising from contract, tort, or other causes.

The project does not make any separate representation or undertaking to any corporation, individual, or organization that could be interpreted as guaranteeing the truthfulness, accuracy, or completeness of the information contained in this Whitepaper.

Before making any decision relating to a contract, investment, or other transaction based on the contents of this Whitepaper, you should consult an independent professional in the relevant field.

Disclaimer

If you are a citizen or resident of a country or region, including a resident for tax purposes, where trading in digital tokens or digital currencies is prohibited or restricted under applicable law, you must not purchase or trade BTH. For purposes of this section, a “Person” generally means a natural person residing in the relevant country or a legal entity established or registered under the laws of that country.

Purchased tokens must also not be offered, distributed, resold, or otherwise transferred to persons subject to the foregoing eligibility restrictions. Each user is responsible for identifying and complying with the requirements and restrictions applicable in his or her jurisdiction. Where necessary, users should consult legal, tax, accounting, or other relevant professionals to confirm the applicable requirements.

BTH tokens are not designed or offered for the purpose of constituting securities, digital currencies, commodities, or any other particular type of financial instrument. However, the legal characterization of BTH may vary depending on the laws and regulatory standards of each jurisdiction, and users should independently confirm the regulations applicable to them.

This Whitepaper is not a prospectus or subscription offer and is not intended to constitute an offer of securities or a solicitation of investment in the form of securities in any jurisdiction. The possibility cannot be excluded that BTH tokens may be classified as securities or other regulated assets under current or future laws in certain jurisdictions.

The project does not provide individual opinions or advice regarding the legal classification of BTH tokens or the regulatory consequences arising from such classification. Any decision to acquire, sell, or otherwise transact in BTH must be made at the user’s own discretion and responsibility. The mere fact that this Whitepaper has been provided must not be relied upon as the basis for entering into a contract or making an investment decision.

Bitcoin Hunter White Paper

[Bitcoin Hunter Service and Operational Direction]

Bitcoin Group is continuously improving the technology and services of Bitcoin Hunter, an automated mining application system, and is expanding its functions and support framework to make the service more convenient for users.

Bitcoin Hunter was developed with the objective of providing an environment in which anyone can use cryptocurrency mining services more easily and conveniently. One of its primary goals is to build a blockchain-based service and personal cryptocurrency automated mining system that can be used in real-world environments.

Some free-to-mine cryptocurrency services may require repeated user actions, such as opening the application each day, pressing a mining button, or watching advertisements. Bitcoin Hunter is designed to reduce such repetitive actions through automated mining functions and to improve overall user convenience.

The project plans to continuously enhance the stability and convenience of its core services, including automated mining and transfer functions, while gradually expanding its service coverage and support system so that users in a wider range of regions can access the service.

Bitcoin Hunter is focused not only on technology development itself but also on how blockchain- and cryptocurrency-related technologies can be applied in actual service environments.

The following sections provide an overview of the key features and service structure of Bitcoin Hunter

Bitcoin Hunter White Paper

First, the Basic Structure of Bitcoin Hunter.

Bitcoin Hunter is a cryptocurrency project based on blockchain technology and aims to provide an environment in which users can access mining services more easily and conveniently.

The filing and registration status of intellectual property rights relating to Bitcoin Hunter is provided based on verifiable official sources, including public records of patent authorities in relevant jurisdictions. Some free-to-mine services, including Pi Coin, may require separate user actions such as opening the application, pressing a mining button, or viewing advertisements. Bitcoin Hunter is designed to improve convenience in this user process.

Bitcoin Hunter has been designed with reference to certain issuance and blockchain structures similar to those used by Bitcoin. Specific information regarding total issuance, mined and circulating supply, halving schedules, and other quantitative matters is provided based on blockchain data and official project announcements.

The system is also being developed with consideration given to the electricity consumption associated with PC-based mining and the processing efficiency of blockchain networks, with the aim of improving energy efficiency as well as the convenience of remittance and transfer functions. Specific information relating to security and technical performance is provided based on verifiable technical materials and official disclosures.

The project plans to pursue broader trading support on global virtual-asset exchanges. Specific schedules and the availability of trading support will be announced through the official notices of the relevant exchanges.

Airdrops, events, and other participation programs conducted by the project are also operated in accordance with the official information and detailed conditions applicable at the relevant time.

Second, Bitcoin Hunter's Mining Method.

Bitcoin Hunter uses a blockchain-based cryptographic computation structure. A hash is a one-way cryptographic technique that converts an input into a fixed-form output according to a defined set of rules. It is generally very difficult to reconstruct the original input using only the resulting hash value. In a typical proof-of-work structure, multiple values are repeatedly tested until a result satisfying a predefined condition is found. The number of hash computations processed per second is referred to as the hash rate.

Under this type of structure, a valid block is determined through the network's consensus process, helping prevent the Double-Spending Problem in which the same asset is used more than once.

Based on this blockchain structure, Bitcoin AI Dollar is configured with consideration for both security and transfer efficiency. Specific information concerning the algorithms used and related intellectual property rights is provided based on objectively verifiable official sources.

Bitcoin Hunter also aims to consider both power efficiency and processing performance through a mining structure that applies the Scrypt algorithm. Specific performance data and the scope of technical application are provided based on actual technical materials and verifiable information.

The network's transaction-processing method and the scope of data recorded on the blockchain are also structured with efficient system operation in mind. By separately managing data that can be processed outside the blockchain, the project aims to reduce the processing burden on the network and create a more efficient service environment.

Bitcoin Hunter White Paper

Third, the Bitcoin Hunter Whitepaper.

This Whitepaper is intended to serve as a reference document that explains Bitcoin Hunter's key technical structure and service operation direction in an accessible manner. Detailed information regarding the relevant technology and intellectual property rights is provided based on verifiable official sources, while wallet application functions and other service features can be confirmed through the functions actually provided and the corresponding official information.

Accordingly, this Whitepaper focuses on explaining the project's core structure and operational principles within the scope of information that can be verified.

Fourth, Bitcoin Hunter's Technology, Security, and Transfer Functions.

Bitcoin Hunter is designed with service stability and security as core considerations. Detailed information regarding relevant technologies and intellectual property rights is provided based on verifiable official sources.

The performance, conditions of use, and scope of remittance and transfer functions may vary depending on the actual service environment. Specific details are available through the official information provided for each function.

Fifth, Bitcoin Hunter's User Convenience.

Bitcoin Hunter aims to simplify the user experience by allowing application and wallet functions to be accessed within a single service environment.

Sixth, Bitcoin Hunter’s Energy Efficiency.

Bitcoin Hunter is being designed to reduce the burden of excessive electricity consumption that may arise in PC-based mining processes. Specific figures regarding actual power consumption and energy-saving effects will be disclosed based on measurement data and official technical materials.

Seventh, Bitcoin Hunter’s User Communication Framework.

Bitcoin Group operates communication channels through official social media accounts and other communication methods. Actual channels, operating hours, and response methods are subject to the information published through each official channel.

Eighth, Bitcoin Hunter’s Roadmap.

Key records relating to the operation of Bitcoin Hunter Coin, airdrops, and beta services are provided based on verifiable official announcements and records.

Going forward, the project plans to expand the scope of its services while also pursuing broader trading support on global virtual-asset exchanges. However, specific schedules and the availability of trading support may vary depending on the review processes and policies of each exchange. Any finalized information will be announced through official notices.

Bitcoin Hunter White Paper

Bitcoin was not viewed in its early days in the same way it is viewed today. At the time, the concept of a new digital asset and its potential applications were not widely understood, and many people found it difficult to recognize its potential.

In 2010, Laszlo Hanyecz, a programmer living in Florida, United States, posted an offer to pay 10,000 Bitcoins that he had mined in exchange for two pizzas.

The exchange was ultimately completed, with 10,000 Bitcoins transferred in return for two pizzas. The transaction became widely known as one of the earliest examples of Bitcoin being used to purchase real-world goods and is still frequently cited as an example of the practical use of digital assets in economic activity.

Bitcoin Hunter Coin likewise plans to focus not only on explaining its underlying technology, but also on continuously improving and operating the project with an emphasis on how the technology can be applied in actual services.

Thank you.

Bitcoin Hunter White Paper

Frequently Asked Questions (FAQ)
Free Airdrop Application, Service Use, and Roadmap Information

[01] How is Bitcoin Hunter mined?

After installing the wallet application on a mobile device, users may access the automated mining function in accordance with the procedures established by the service. Whether separate login or mining-button actions are required, when mining begins, the amount credited, and other specific conditions should be confirmed through the official information currently applicable to the service.

The currently announced automated mining amount and crediting conditions may also change in accordance with service operation policies. Users are therefore advised to review the latest official notices.

[02] Please submit the application only once.

Submitting the same application more than once may prevent it from being processed properly. Please submit each application only once.

[03] Please check the processing result after submitting your application.

If your application has not been processed after a reasonable period of time, please check whether any information was entered incorrectly and, if necessary, contact the project through an official information or support channel.

[04] What should I do if I do not know why my application was not approved?

Please review the application criteria and instructions and check whether any required information is missing or incorrect. If necessary, you may seek further guidance through the official information or customer support channels.

[05] BTH Free Automated Mining

BTH’s free automated mining service is provided in accordance with the criteria established by the service. The mining start date, daily credited amount, and other detailed conditions may change depending on operational policies, so please refer to the latest official information.

[06] Free Benefit Program Information

The project may operate referral programs and other benefit programs to encourage user participation. The number of referrals required, BTH holding or usage conditions, and the specific criteria for receiving benefits are subject to the official terms of each program.

[07] New Passionate Member Benefits

Mining, transfer, and other service-related benefits provided to New Passionate Members may vary depending on the applicable program policy. Please refer to the latest official information for specific eligibility requirements and benefits.

Bitcoin Hunter White Paper

[Whitepaper Use and Legal Notice]

This document is a Whitepaper intended to explain the concepts behind the solutions proposed by the Company and its future platform. Its contents may be changed or revised at any time depending on the development and operational status of the project.

The Company is under no obligation to provide individual notice to recipients regarding additional information or updates to this Whitepaper. This Whitepaper has been prepared for informational purposes and for discussion relating to the project. It does not guarantee the current or future value or price of BTH. The Company also does not provide financial or investment-related advice of any kind.

This Whitepaper is a general overview intended to introduce Bitcoin Hunter Coin, its related business model, and the operational direction of the project. It is not intended to offer a regulated financial product or investment product in any jurisdiction, nor is it provided as a subscription document, solicitation, proposal, or investment prospectus.

No decision regarding participation in the project or entry into any contract should be made solely on the basis of this Whitepaper. No express or implied warranty is provided regarding the feasibility, appropriateness, or performance of any forward-looking statement or conceptual description contained herein.

The use of any third-party company name, platform name, or trademark in this Whitepaper does not imply any affiliation, endorsement, sponsorship, or official relationship between the project and such company, individual, or organization. Please review the official materials of the relevant companies and platforms for further details.

Bitcoin Hunter White Paper

Bitcoin Hunter : A New Approach to Blockchain-Based Cryptocurrency Mining Services

1. What is Bitcoin Hunter (BTH)?

Bitcoin Hunter (BTH) is a cryptocurrency project based on blockchain technology. It has been designed with reference to certain issuance structures and halving mechanisms similar to those used by Bitcoin, while incorporating the project's own service structure and operational direction.

Bitcoin Hunter aims to provide users, participants, and community members interested in cryptocurrency technology with an environment in which they can access the service more conveniently.

2. An Issuance Structure Similar to Bitcoin

Bitcoin Hunter applies an issuance schedule, halving mechanism, and limited total supply by referring to certain aspects of Bitcoin's issuance structure. Specific information regarding issuance volume and release schedules is provided based on official project materials and blockchain data.

3. Mining Through an Automated Application

Bitcoin Hunter aims to provide a convenient mining environment through a mining application available on iOS and Android.

The service provides automated mining and wallet integration functions. The scope of functions involving asset transfers, including transfers and withdrawals, as well as the entity responsible for operating such functions, is governed by the Terms of Service and official function-specific information.

4. Halving Structure for Managing BTH Issuance.

Bitcoin Hunter applies a Halving system under which mining rewards decrease at predetermined intervals.

The purpose of BTH's halving structure is to manage the predetermined issuance volume and release schedule. Specific halving schedules and mining reward standards are provided through official project materials.

5. Community Participation and Tiered Benefits.

Bitcoin Hunter considers community participation an important part of project operations. Users may participate in a variety of programs, including mining, events, contests, and promotions. Depending on the relevant program, membership tiers may be operated from general membership through VIP membership.

Benefits and access rights provided at each tier may vary in accordance with the operating criteria of the relevant program. Specific details are subject to the official information in effect at the applicable time.

6. Global Intellectual Property and Technology Base.

The filing and registration status and scope of intellectual property rights relating to Bitcoin Hunter are provided based on objectively verifiable official sources, including public records issued by patent authorities in relevant jurisdictions.

The project's policy is to provide users and community members with transparent access to verifiable information regarding its technology and intellectual property rights.

7. Trading Support Information.

Whether BTH is supported for trading and which exchanges make BTH available may vary depending on each exchange's policies and review results. Users should therefore confirm current trading support through the official notices of the relevant exchange.

Rather than targeting price or profit, Bitcoin Hunter focuses on continuously improving the project by increasing the practical usability of its technology and services.

Don't miss out—become part of the next big crypto revolution with Bitcoin Hunter.
